---

*DVD Logo*

## Objective

To practice with conditionals, variables and operators by making a bouncing dvd logo.

## Instructions

Write a program that creates a rectangle that bounces around the screen just like in this [scene from The Office](#). It doesn't have to have the text (but would be cool) and should change colors when it hits a wall. No PImage.

## Hints

Watch this [video](#) to understand how to get a shape to change its direction.

## Challenge

Can you make it look just like the DVD Logo in the video?
